Experiment – 10

Student Information System Using Zoho One (SaaS)

Aim

To create a simple cloud-based Student Information System using Zoho One and a C program to display student information, demonstrating Software as a Service (SaaS).

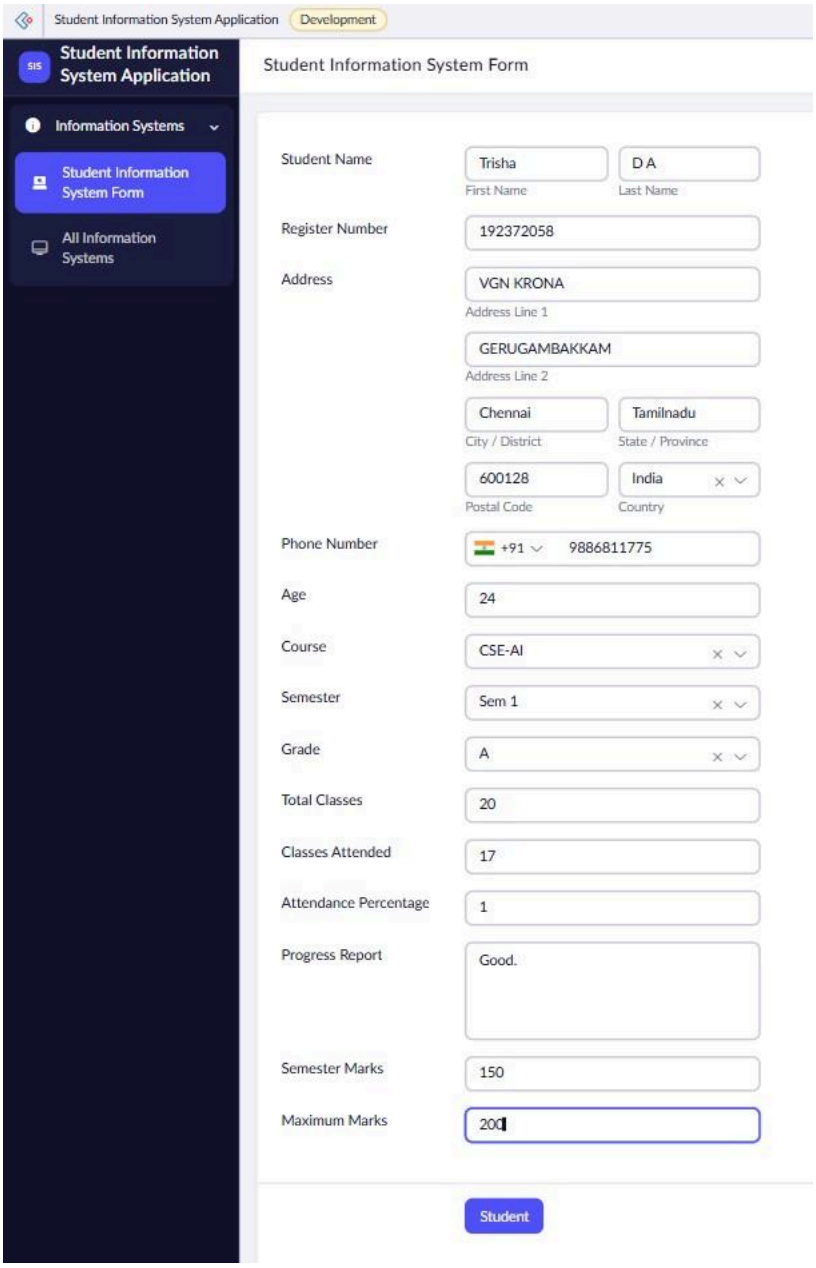

Procedure

1. Log in to the Zoho One cloud platform.
2. Open Zoho Creator from the Zoho One applications.
3. Create a new application named Student Information System.
4. Create a new form named Student Information Form.
5. Add the required fields:
    - Student ID
    - Student Name
    - Register Number
    - Address
    - Phone Number
    - Age
    - Course
    - Semester
    - Grade
    - Total Classes
    - Classes Attended
    - Attendance Percentage
    - Progress Report
    - Semester Marks
    - Maximum Marks
6. Configure the field types according to the data required.
7. Design and arrange the form for easy user interaction.
8. Configure a workflow to calculate attendance percentage automatically.
9. Save and publish the form.
10. Enter sample student details into the form and submit the record.

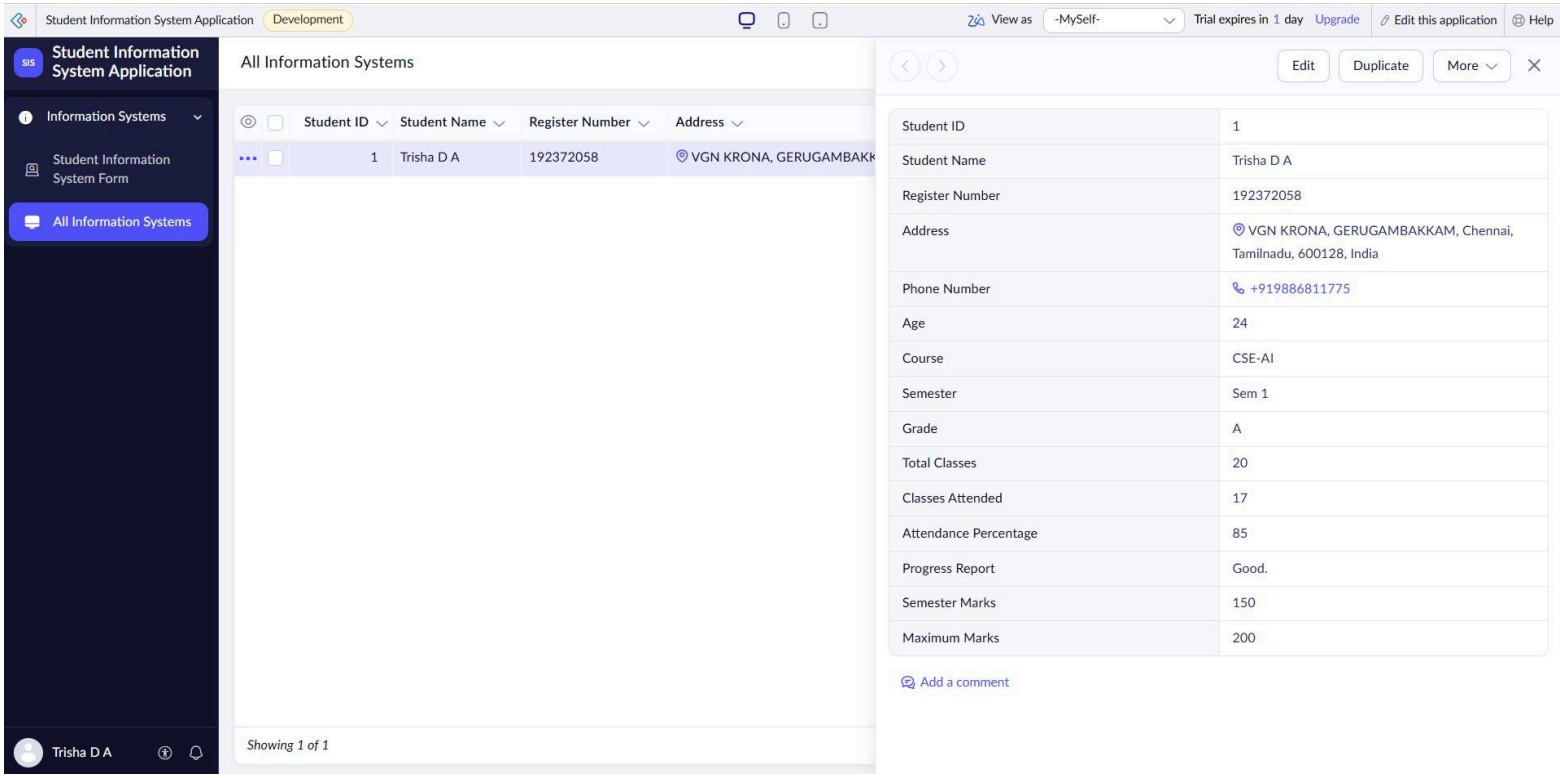

11. Write a C program to accept and display student information, including name, register number, age, course, semester, attendance percentage, and semester marks.
12. Compile and execute the C program using an online C compiler.
13. Verify that the student details are displayed correctly and the submitted records are stored in Zoho Creator.

Implementation

Input:

Output:

Result

Thus, a Student Information System was created using Zoho One and a C program to display student information, demonstrating the basic concepts of a cloud-based Software as a Service (SaaS) application.
